

Introduction to Machine Learning (Using Python)

(1st - 3rd April 2022)

The first day was primarily about the basics of Python, as fresh faces and intrigued minds typed away endlessly on their machines. The next two days were focused on machine learning itself and was taught from the very scratch. After almost seventeen hours of hard work spanning from 1st to 3rd April, the workshop came to an end with a quiz contest to test the knowledge soaked in by the participants.
